Legitimate purpose	✓ Yes
Drafter library	✓ Yes
No nonconstant global variables	✓ No obvious violations

Code quality issues

I also found that the code has no accompanying route tests in the files inspected, several functions lack docstrings or return types, and multiple lines exceed the 120-character limit.

The code uses `set_website_title(...)`, but your professor specifically requires `set_site_information(...)`.

These are issues worth correcting, not just cosmetic improvements.

I've prepared a corrected version

Campus Roomfit — Reviewed Package

Download corrected website and tests ↗

Contains main.py, test_main.py, and submission instructions.

I made these corrections in a separate copy:

- Added a fourth State field that controls match filtering.
- Added two routes, bringing the total to **12**.
- Added the required `set_site_information(...)`.
- Added tests covering all 12 routes.
- Added missing docstrings, return annotations, and explanations of advanced techniques.
- Shortened all source lines to 120 characters or fewer.
- Added an option to show only students seeking the same type of match.

The updated code passes Python syntax checks and 15 tests using a simulated Drafter interface. **It still needs testing with the real Drafter library**, followed by deployment and browser testing.

What you must do to submit

1. Put the reviewed `main.py` and `test_main.py` in your GitHub repository, after checking the changes.
2. Add your brainstorming and design worksheets.
3. Add the complete AI conversations used for the project, including this one.
4. Run the tests and check that every website feature works.
5. Deploy the website and confirm its public URL opens.
6. Record an audible, visible walkthrough of the deployed site and link the video in GitHub.
7. Submit the **deployed website URL** in Canvas.

The deployment and video are still unverified, so the assignment isn't ready to submit yet.

One thing I need from you: Send me your **GitHub repository link**. I'll check the actual uploaded files and deployment against the rubric before you submit.

You

Make sure the code works without errors/ bugs

Worked for 2m 52s

ChatGPT

Campus Roomfit passed all available local tests.

I checked the website code, corrected several potential bugs, and prepared an updated version.

Campus Roomfit — Bug-Checked Version

Download the updated website ↗

Take your curiosity further

Includes Python code, route tests, additional checks, and submission instructions.

Test results

Check	Result
Python syntax	✓ Passed
12 website routes	✓ Passed in simulated tests
Create and edit profiles	✓ Passed
Delete profiles	✓ Passed
Compatibility calculations	✓ Passed
Save and reload profiles	✓ Passed
Handle damaged saved data	✓ Passed
Real Drafter website	? Not tested
Public website deployment	? Not tested

23 local tests passed using a simulated Drafter interface. I also checked the required Drafter functions against its official documentation. Drafter Doc... +1

I cannot guarantee zero bugs because the actual Drafter library and published website haven't been tested.

What you need to do now

1. Replace your GitHub project's `main.py` with the updated version.
2. Run the website using Drafter.
3. Test creating a profile, finding matches, editing, and deleting.
4. Confirm the deployed website opens and works.
5. Submit the working website URL to Canvas.
